Use Case Description for Printing & Delivery System

1. Checkout & Select Payment

- **Identifier and Name:** UC1 Checkout & Select Payment
- **Initiator:** Customer
- **Goal:** Allow the customer to confirm their print order and complete the payment process.
- **Precondition:** The customer must be logged into the system and have print items in the shopping cart.
- **Postcondition:** The order details are stored in the database, and the status is set to 'Pending'.
- **Assumptions:** The customer has a valid delivery address, and the payment gateway is operational.
- **Main Success Scenario:**
    1. The customer selects the "Checkout" option from the shopping cart.
    2. The system displays the order summary, total price, and delivery area fees.
    3. The customer selects a payment method (Cash on Delivery or Online Payment) and confirms the order.
    4. The system processes the payment.
    5. The system generates an Order ID, saves the order, and displays a success confirmation.
- **Extensions:**
- 4.a Payment authorization fails (Invalid card details).
- 4.a.1 The system displays a "Payment Failed" error message.
- 4.a.2 The system asks the customer to retry or choose another payment method.

2. Manage Print Orders

- **Identifier and Name:** UC2 Manage Print Orders
- **Initiator:** Operator
- **Goal:** Allow the operator to review incoming orders, download the attached files, and assign them for delivery.
- **Precondition:** The operator must be logged into the operator dashboard.
- **Postcondition:** The print files are downloaded, and the order is successfully assigned to a delivery agent.
- **Assumptions:** There are new pending orders in the system, and delivery agents are available.
- **Main Success Scenario:**
    1. The operator navigates to the incoming orders list.
    2. The system displays all new print orders.
    3. The operator selects a specific order to process.
    4. The operator downloads the customer's print files (*Includes: Download Print Files*).

5. The operator assigns an available delivery agent to the order (*Includes: Assign Delivery Agent*).
6. The system saves the updates and notifies the assigned delivery agent.

- **Extensions:**
- 4.a The uploaded print file is corrupted or missing.
- 4.a.1 The system displays a "File Not Found or Corrupted" error.
- 4.a.2 The operator pauses the order and contacts the customer to re-upload the document.
- 5.a No delivery agents are currently available.
- 5.a.1 The system displays a "No Delivery Agents Available" warning message.
- 5.a.2 The operator leaves the order status as "Pending Assignment" and tries to assign an agent later.

3. Update Order Status

- **Identifier and Name:** UC3 Update Order Status
- **Initiator:** Delivery Agent
- **Goal:** Allow the delivery agent to update the delivery outcome of an assigned order after reaching the customer.
- **Precondition:** The delivery agent must be logged in and have an order currently out for delivery.
- **Postcondition:** The order status is updated in the database to reflect the final delivery outcome.
- **Assumptions:** The delivery agent has internet access on their mobile device at the delivery location.
- **Main Success Scenario:**
    1. The delivery agent arrives at the customer's location.
    2. The delivery agent opens the specific order details in the system.
    3. The delivery agent clicks on "Update Order Status".
    4. The system prompts the agent to select the new status.
    5. The delivery agent selects "Delivered" and confirms.
    6. The system updates the order record and synchronizes the status for the customer and operator.
- **Extensions:**
- 5.a The customer is not reachable or the delivery fails.
- 5.a.1 The delivery agent selects "Delivery Failed / Rescheduled".
- 5.a.2 The system updates the status and notifies the operator to follow up.

4. Upload Document

- **Identifier and Name:** UC4 Upload Document
- **Initiator:** Customer
- **Goal:** Enable the customer to upload a digital file to the system for printing.
- **Precondition:** The customer must be authenticated and logged into the portal.
- **Postcondition:** The document is securely stored on the server and linked to the customer's account.

- **Assumptions:** The customer has a working internet connection and the file is ready on their device.
- **Main Success Scenario:**
    1. The customer selects the "Upload Document" option on the dashboard.
    2. The system opens a file selection window.
    3. The customer selects a PDF document from their local device and clicks upload.
    4. The system verifies the file format and size constraints.
    5. The system saves the file to the secure server and displays a success message.
- **Extensions:**
- 4.a The selected file format is not supported (e.g., Word instead of PDF) or exceeds the size limit.
- 4.a.1 The system displays an "Invalid File Format or Size" warning.
- 4.a.2 The system prompts the customer to choose a valid file.
