System Requirements Specification (SRS) Project Name: Online Printing & Delivery System

Project Overview The Online Printing & Delivery System is a comprehensive digital platform designed to automate and streamline the printing process. It allows customers to upload documents, customize print settings, receive dynamic real-time pricing, and track their delivery, all while providing print shop operators with a robust dashboard to manage orders and assign delivery agents efficiently.

Functional Requirements (FR)

User Requirements (UR)

- **UR-01 (Account Access):** Customers, operators, and delivery agents shall be able to register and log into their respective dashboards.
- **UR-02 (Order Creation):** Customers shall be able to upload documents, select print configurations (Paper size, Color, Binding), and submit orders.
- **UR-03 (Order Tracking):** Customers shall be able to view their order history and track current delivery statuses.
- **UR-04 (Operator Management):** Operators shall be able to browse incoming orders, download print files, and assign specific delivery agents to orders.
- **UR-05 (Delivery Management):** Delivery agents shall be able to view their assigned tasks, open customer locations on a map, and log the final delivery outcome.

System Requirements (SR)

- **SR-01 (Automated Pricing):** The system shall automatically calculate the final order cost based on page count, selected print configurations, and regional delivery fees.
- **SR-02 (File Validation):** The system shall autonomously scan uploaded files to verify they are in PDF format and within acceptable size limits before saving them.
- **SR-03 (Payment Processing):** The system shall interface with third-party payment gateways to verify online transactions and auto-generate order confirmations.
- **SR-04 (Status Synchronization):** The system shall instantly reflect any order status changes (made by the operator or agent) on the customer's tracking interface.

Non-Functional Requirements (NFR)

- **NFR-01 (Performance):** The dynamic pricing calculation must execute in under 1.0 second, and file uploads must provide real-time visual feedback.
- **NFR-02 (Security):** User passwords must be cryptographically hashed in the database, and print files must be restricted to authorized operators only.
- **NFR-03 (Usability):** The user interface must be fully responsive across mobile and desktop devices.
- **NFR-04 (Availability):** The system shall maintain a 99.9% operational uptime.
